

Piclo Flex - Fact Sheet

August 2019 - subject to change

Intro

Piclo Flex is an independent flexibility marketplace which is operational in GB. It enables System Operators (SOs) to publish locational flexibility needs and run competitions. It allows Flex Providers (FPs) to register their flexible assets, enabling them to qualify for and take part in competitions.

Below are the step by step instructions for FPs to get up and running on Piclo Flex.

Step 1 - Sign up to Piclo Flex

- It's free and open to all FPs in GB
- Upload data on assets - all asset sizes, types and statuses (including planned) can be uploaded
- Check to see if there are any open SO competitions for flexibility services
- Automatic email notifications are sent when new competitions are added

Step 2 - See if and where you qualify

- Piclo's map helps you instantly visualise where your assets fall relative to live competitions
- Assets added before qualification close will automatically qualify based on their location and voltage connection level
- Automatic email notifications are sent if any of your assets qualify
- Assets will then undergo technical assessment by the SO for a final qualification decision
- Automatic email notifications are sent if assets fail the technical assessment for any particular competition

Step 3 - Take part in competitions

- Automatic email notifications are sent when competitions open
- Bids can be submitted to competitions for which you qualify
- Automatic email notifications are sent with competition results
- Results can be reviewed at any time on your Piclo account

Piclo is constantly updating and improving the marketplace. New features will be released over time. For the most up to date information, check the website <https://picloflex.com/>.
